Free Memory Screening
A Closer Look at Memory Changes
Mercy Health Mall

Wednesday
Sept 6, 2023 10am to 2pm
Reservations are Required

Early detection is important
Treatment is possible. Stay in control of your life.

Get immediate results
Keep them for future comparison and or share them with your physician. At your request we will fax them to your physician.

Early detection is important
Memory Screens are like screens for blood pressure, vision, diabetes, or stroke. They contribute to prevention.

Treatment is possible
Some types of dementia are reversible, like those from nutritional & vitamin deficiencies, depression, thyroid issues, and more.

Knowledge means more control
Dementia that are not reversible can often be treated with medications that could slow down the process and preserve quality of life for a longer period of time.

Please call Karen Tennyson at the ADRC for reservations - 608/741-3615.
